## “YOU CAN PUT YOUR TRUST IN OUR RACKS”

*High quality storage and rack systems along with ingenious warehousing systems are of great importance in the refrigeration industry, an area in which Stow has specialised for years. Over the years the company has accumulated an enormous amount of expertise in the development and production of high quality racking systems for the storage of, for example, pallets, small parts and long goods. “We also have great expertise in the design and construction of platform systems,” says commercial director Philip Mylle.*

With extremely solid storage and racking systems Stow endeavours to create a strong added value for its customers’ logistical activities. “Our flexible and advantageous system solutions suffice with regard to the highest quality requirements on the international market. With three production plants and a dense sales and service network we are excellently equipped to serve our clientele as required. Our company forms part of the Averys Group and provides products and services in more than 30 countries, supported by the know-how of some 700 employees who continue to come up with innovative ideas and individual engineering.”

### PRODUCTION ESTABLISHMENTS

Starting in 1977 with a factory in Wevelgem, Stow developed a number of further production facilities to meet the growing de-

mand. “In Dottenijs we have enjoyed the benefits of fully automated production since 2006. Ten years before we had already brought our plant in Shanghai (China) into operation, which was meticulously extended in 2008. We also operate a production unit in Karvina (Czech Republic).”

Stow’s industrial racks consist of solutions for the storage of pallets and small goods, cantilever racks and mezzanine constructions.

Besides traditional pallet racks and drive-in racking, Stow also produces and specializes in mobile pallet racks and the Atlas shuttle solution - two products that have become very popular in coldstore environments.

### COMPREHENSIVE RANGE OF SERVICES

The high quality products are supported by an extensive package of services. Philip Mylle: “Our engineering and product development departments create warehouse solutions in line with the customer’s needs. We also carry out periodic inspections of industrial storage systems and warehouses to guarantee optimum safety and sustainability. Our team of service technicians also provide maintenance and repair services.”
